

ALLIEDSTAR **RANGE.**

Two intraoral scanners — the arch, the bite and the soft tissue, in true colour

FAST. OPEN. EXCEPTIONALLY PRECISE.

AlliedStar intraoral scanning — High-definition performance without compromising simplicity

The AlliedStar intraoral scanner combines impressive scanning speed with high-definition capture in an intuitive, easy-to-connect system. Its open workflow, range of included apps and generous cloud storage make integration into the digital practice simple and flexible. Particularly impressive is its ability to capture soft-tissue detail, including challenging post-surgical scans — delivering the speed and precision required for demanding digital workflows. With a compelling balance of performance, versatility and value, AlliedStar brings premium scanning capabilities within reach.
