NANOCERAM. PRINTED FOR PERMANENCE.

Hybrid ceramic resin — Strength, aesthetics and durability for definitive full-arch restorations

NanoCeram Permanent Resin is an advanced hybrid restorative material combining a composite resin matrix with approximately 50% ceramic particle content, engineered to deliver an exceptional balance of structural strength, aesthetics and long-term durability. Designed for definitive restorations, its printable workflow allows the full-arch prosthesis to be produced rapidly following surgery, combining the efficiency of digital manufacturing with the performance required for a high-quality final restoration.

- HYBRID CERAMIC
- NATURAL AESTHETICS
- LASTING STRENGTH
